Global Trends Hub — Developer Brief
Official name is [Briefa]

Oct 14, 2026 · @enoveta

1. What to build

Build a web platform (mobile-first, PWA) that shows only the **most trending and most important headlines** worldwide, across five sections: News, Jobs, Scholarships, Opportunities, and Events & Announcements.

- The platform shows **headlines and short summaries only**, never full articles or full job posts.
- Clicking an item opens the **original source** in a new tab, like Google News.
- Everything is collected, filtered and ranked **automatically**, with an admin panel for control.
- Default language is **English**, with a Google Translate widget for other languages.
- Coverage is **global**, with a country selector (Rwanda is the first local focus).

Order of work: build the real frontend first with dummy data (no separate Figma phase), then connect real data and features, then build the full backend (see section 7).

First release is done when a user can open the site, see the most important current updates within seconds, open any category's own page, translate the content, and click through to the original source.

2. Content sections

There are five sections, and each one is split into categories. **Every category has its own page** (see section 5). Each item is a short card that links to the original source.

Section	Categories (each one = its own page)
News	Breaking, Trending Now, Rwanda (Local), Africa, World, Politics & Governance, Business & Economy, Finance & Markets, Technology & Innovation, Startups, Science & Research, Environment & Climate, Agriculture & Food, Energy, Health & Public Health, Education, Crime, Justice & Public Safety, Security & Conflict, Sports, Entertainment & Culture, Travel & Tourism, Community & Human Interest
Jobs	Remote, International Organizations (UN, NGOs), Government & Public Sector, Tech & IT, Finance

KN 78 St, Norrsken House, Kigali
www.enoveta.com
info@enoveta.com
+250788917742

Section	Categories (each one = its own page)
	& Banking, Health & Medical, Engineering, Education & Research, Agriculture, Sales & Marketing, Media & Communications, Internships & Graduate Programs, Volunteering
Scholarships	Undergraduate, Master's, PhD, Fully Funded, Partially Funded, Fellowships, Exchange Programs, Research Grants, For Africans, plus study destinations (Europe, USA & Canada, Asia, Africa)
Opportunities	Business & Investment Opportunities, Startup Funding & Grants, Accelerators & Incubators, Competitions & Awards, Hackathons, Tenders & Calls for Proposals, Training, Courses & Certifications
Events & Announcements	Upcoming Events, Local Announcements, International Announcements, Government & Institutional Notices, Emergency & Public Safety Alerts, Public Holidays & Important Dates, Elections, Exam Results & School Calendars, Conferences & Summits, Tech Events, Sports Events, Concerts & Entertainment, Commemorations & Anniversaries

Categories must be managed from the admin panel, so they can be added, renamed, reordered or hidden without code. An item can belong to more than one category (for example, a story can be both Politics and Africa).

Events & Announcements has two tabs: **Local** (by the user's selected country) and **International**. Each has **Upcoming** (sorted by nearest date, with a countdown) and **Recent**.

Every news card shows: the headline, a 1–2 sentence summary, category, country or region, source name and logo, publish time and last-updated time, an optional image or video thumbnail, labels, and the original-source link.

Jobs, scholarships, opportunities and events use structured listings that also show: the organization, the location or remote status, opening and closing dates (or the event date), eligibility or target audience, the official apply or info link, verification status, the date last checked, and Open, Closing soon or Closed status.

info@enoveta.com
+250788917742

Labels: Breaking (urgent, newly developing), Important (high public impact), Trending (gaining attention fast), Developing (facts still changing), Upcoming (the event or deadline is still ahead), Closing soon, Verified source, and AI summary.

3. Content rules (most important part)

The platform publishes only what is trending or important. Most collected items should be dropped.

1. **Headlines only.** Store and show the title, a short AI summary (max 2 lines), source, date and link. Never copy full articles or full job descriptions.
2. **Always link to the original source.** Open it in a new tab, and show the source name and logo on every card.
3. **Trusted sources only.** Collect only from the approved source list in the admin panel. Prefer official sources and established publishers, and respect each site's robots.txt, copyright and terms of use.
4. **Score every item and publish only high scores.** Each item gets an importance score based on:
    - how many independent trusted sources cover the same story
    - how fast mentions or views are growing (trend speed)
    - whether it is an official or verified announcement
    - urgency and public impact
    - relevance to the selected country, city or topic
    - freshness and how often it is updated
    - for jobs and scholarships: a well-known organization, international reach, a fully funded offer, and a deadline that is still open
    - user interest, which never outranks importance alone
5. **Remove duplicates.** Merge the same story from many sources into one card, and show "Covered by X sources".
6. **Auto-expire old items.** Flag listings near their deadline, then archive jobs, scholarships and opportunities after it passes and events after their date. Drop news from the main feed after 24–48 hours. Remove broken links.
7. **Block low-quality content.** Filter out spam, clickbait, ads, gossip, and unverified social posts.
8. **Human review.** Low-confidence items go to an admin review queue before they get prominent placement.
9. **Be careful in sensitive moments.** During elections, emergencies, conflicts or health crises, never show unverified claims as fact; label them "Developing" or hold them for review.
10. **Be transparent.** Label AI summaries and translations as such, show the original headline and language next to a translation, and add a "Report a problem" button on every item.
11. **Personalization never hides important updates.** Breaking and Important items always appear in the main feed.

4. Core features

- **Live trending feed:** a homepage mixing the top items from all five sections. It auto-refreshes every 5–15 minutes and has a "Breaking" ticker at the top.
- **Search:** a global search across headlines, listings, events, sources, places and topics, plus a search box inside each category.
- **Filters:** by category, country or region, local vs international, language, date, source, and content type. Listings also filter by level, field, remote or on-site, and deadline.
- **Countdown labels:** "Deadline in 3 days" on jobs, scholarships and opportunities, and "Starts in 5 days" on events.
- **Translation:** a clearly visible Google Translate widget in the header. English is the default, the chosen language is remembered, and the original headline stays visible.
- **Preferences (optional, no account needed):** favorite categories, countries and topics, used to order the user's feed.
- **Alerts:** browser push notifications and an optional email digest for breaking news, followed topics, closing deadlines, and upcoming events.
- **Save and share:** bookmark items, and share to WhatsApp, X, Facebook, LinkedIn, or by copying the link.
- **Accessibility:** accessible colors, readable fonts, keyboard navigation, alt text and screen-reader labels.
- **Dark/light mode**, fast loading on slow mobile data, and a light text-only mode.

5. Pages

Page	Contents
Home	Breaking ticker at the top, then a "Top Trending" block. Below that, **every section and every category gets its own block** (e.g. Politics, Technology, Remote Jobs, Fully Funded Scholarships, Upcoming Events). Each block shows its top 4–6 headlines and a "See all" link to the category page. The admin sets the order of the blocks.
Section page (e.g. /news, /jobs)	The top items of that section, with a list or tab bar of all its categories
Category page (e.g. /news/politics, /jobs/remote, /scholarships/phd, /events/international)	**All headlines in that category only**, newest and most trending first. At the top are the category title, a short description and a "Trending in this category" strip. It has search within the category

www.enoveta.com
info@enoveta.com
+250788917742

Page	Contents
	and filters for country, local or international, language, source and date, with load more or infinite scroll. Every category works the same way.
Events & Announcements	Local and International tabs, each split into Upcoming (with countdown) and Recent
Search results	Results from all sections, grouped by section
Saved	The user's bookmarked items
Subscribe	Email digest and push alerts, chosen by category and country
About / Sources	The list of trusted sources and a contact form

Header: the logo, the main menu (News, Jobs, Scholarships, Opportunities, Events) with category dropdowns, a country selector, search, the translate widget, and a dark mode toggle. On mobile, the menu becomes a bottom bar plus a category slider.

6. Technical requirements

Suggested stack (the developer may propose an equivalent):

- Frontend: Next.js (React) as a PWA, built for SEO with server-side rendering
- Backend: Node.js or Python (FastAPI)
- Database: PostgreSQL, with Redis for caching the feed
- Jobs and workers: a scheduler that runs collectors every 5–15 minutes
- AI: an LLM API for summaries, categorization, language detection, and duplicate matching

Data collection

Use every available method and send them all into one pipeline: **collect → remove duplicates → AI summary and category → score → publish**.

1. **RSS / Atom feeds:** news sites, Google News RSS by topic and country, government sites, and job and scholarship sites that offer feeds.
2. **Official APIs where available,** for example:
    - News: NewsAPI, GNews, GDELT, The Guardian API, New York Times API
    - Jobs: ReliefWeb API, Adzuna, Jooble, Remotive (remote jobs), USAJobs
    - Trends: Google Trends, the YouTube Data API (trending news videos)

KN 78 St, Norrsken House, Kigali
www.enoveta.com
info@enoveta.com
+250788917742

3. **AI search:** an LLM with web search (e.g. Tavily, Perplexity, or the Google Programmable Search API) runs scheduled queries such as "latest fully funded scholarships" or "major announcements in Rwanda today". It finds trending items that feeds miss and checks that a story is confirmed by several sources.
4. **Web scraping, only where allowed** (check robots.txt and site terms): for sites with no feed or API, including news sitemaps and career pages.
5. **Official social accounts:** government, UN and institution accounts on X, Telegram channels and Facebook pages, through their APIs where possible.
6. **Newsletters and alerts:** subscribe a system inbox to Google Alerts and official newsletters, then parse the incoming emails automatically.
7. **Manual input:** the admin can add or pin any item, announcement or event.

Rules for every method:

- Store only the metadata: title, summary, source, URL, image URL, date, country, category, score, and deadline or event date.
- Each source is a config entry (URL, method, country, section, category, trust level), so new sources are added without code changes.

Admin panel

- Add, edit, pause and approve sources, and set each one's country, category, language and reliability level
- Manage categories and locations (add, rename, reorder, hide)
- A review queue for flagged and low-confidence items
- Pin, hide, merge, edit or re-categorize any item, and add announcements or events by hand
- Adjust scoring weights and the minimum score to publish
- Monitor broken links, feed delays, duplicate detection, and translation failures
- Basic metrics: items collected vs published, clicks to sources, and content quality

Quality targets

- Pages load in under 2 seconds on 3G
- Fully responsive on mobile, tablet and desktop
- Accessible (WCAG basics)
- Basic SEO: clean URLs, meta tags, and a sitemap
- Basic analytics (page views, clicks to sources)
- Built to add new countries and interface languages without restructuring

7. Delivery phases

1. **Phase 1, real frontend with dummy data:** build directly in code, with no Figma step. Build every page: home with all category blocks, section pages, every category page, listings, events, search,

KN 78 St, Norrsken House, Kigali
www.enoveta.com
info@enoveta.com
+250788917742

saved, subscribe, and the admin screens. Include responsive layouts, dark mode, labels, countdowns and the translate widget. All content comes from dummy JSON files shaped like the future API, so real data can replace them without redesign. **Deliverable:** a complete, clickable site.

2. **Phase 2, real info and real features:** replace the dummy data with real items from RSS feeds, official APIs and AI search (Rwanda and world first). Real headlines, summaries, categories and source links appear. Search, filters, bookmarks, translation, countdowns and auto-expiry all work for real.
3. **Phase 3, real backend:** the full database and ingestion pipeline (including scraping, social sources and newsletters), scoring, duplicate merging, the human review queue, and the complete admin dashboard with monitoring. Push alerts, the email digest and user preferences also arrive here.
4. **Final phase, expansion:** more countries and regions, Kinyarwanda and French interface languages, text-to-speech for headlines, optional mobile apps, and tuning the scoring from usage data.

Open question: confirm the final product name and domain before launch (working name: Global Trends Hub).
